

## SunnySide

Do not be afraid of mistakes, providing you don't make the same one twice. I've made the mistake of staying out in the sun too long. If you do, you can get aching sunburns. You can protect yourself with sunscreen. I think my school needs a shade because while students wait, their defenseless unsuspecting necks get scorched by the blazing sun.

To begin with, staying out in the sun too long is a preposterous idea. You get aching spots that feel like army ants lining up to bite you. It can also be deadly, like skin cancer. My nice but short tempered man once told me that if I didn't put on sunscreen I would turn into a cocodrillo.

Secondly, you can use sunscreen, the liquid forcefield to protect from the sun. It will fight a courageous battle against the sun's UV rays. It may be sticky and uncomfortable, but would you rather be sticky than suffering or dying. One time an aching, itching, burning spot latched on my brother's neck he cried, wailed, and complained. He stated it burned more than icy hot. Of course it was a sunburn.

Furthermore, I think my one of a kind school deserves shade because when exhausted students trudge out of a long hardworking day of school and stand still waiting for mams or dads to pick them up, they are forced to withstand the sun's powerful rays. Trouble brings experience and experience brings wisdom. Most people have had trouble with the sun. Sadly I am one of them, now I know better. Whenever I go home with my brothers friend I stare into the desperate faces of kids looking up at the sky hoping their savior would rescue them from the prison of heat. School staff member enthusiastically call out the names of students. It brings no effect though.

In conclusion, protecting from the sun is a marvelous idea because you can get aching sunburns but you can protect yourself with sunscreen. My school deserves a shade because kids are forced to suffer under the scorching sun. Either write something worth reading or do something worth writing. I just wrote about something worth reading. Sun safety.
